

# GP Live

**GP Live is an innovative mobile app that provides a simple communication platform between patients and GP practices.**

**GP practices can manage all the information available on the app through a user friendly web admin section. Patients can download the app and access any information published by their GP practice. This includes real time information such as:**

- ✓ Push notifications
- ✓ Patient Surveys
- ✓ Instant feedbacks
- ✓ Live notice boards
- ✓ Important contact information
- ✓ Medical news such as flu jabs and breakouts

Patients will be able to send instant responses back to their GP practice helping the surgery to improve their services.

GP practices can also use the app web admin to quickly create patient surveys and generate different management reports.
